

ESCO BIOHAZARD SAFETY CABINETRY

Standard Hinged Windows

Our standard hinged window is self-supporting in the open position for easy loading and unloading of equipment into the cabinet. Escó Biohazard Safety Cabinets are fully alarmed: opening the window triggers automatic alarms in order to warn the operator of unsafe cabinet conditions.

In addition, consider choosing a sliding window for your safety cabinet - now available on all Escó models!

Easy to Use Maintenance Cover

All Escó Biohazard Safety Cabinets are constructed in a unique design that isolates all fluorescent lighting, electrical wiring and cabinet controls from the main chamber. Decontamination is thus unnecessary before servicing the cabinet. In addition, airflow uniformity is increased. The main maintenance cover lifts up easily without the use of any special tools and is self-supporting in the open position for rapid cabinet service and less downtime.

Spacious Cabinet Interior

Escó Biohazard Safety Cabinets have one of the largest cabinet interiors to provide you with more space and better value. Our windows have 190 mm / 7.5" working opening heights. All working tabletops and removable trays* are furnished in high-quality stainless steel (grade 304). In addition, our exclusive sloping front edge reduces operator fatigue and decreases inflow air turbulence.

** Removable trays are only available on Escó Class II Biohazard Safety Cabinetry*

Designed for Comfort

Our cabinets have been designed for maximum operator comfort. Transparent working sides eliminate operator fatigue and increase visibility for a better working experience. Interior lighting is glare-free, flicker-free and of the highest quality, providing maximum illumination within the interior.
